About me

- I am a self-taught software engineer and musician.
- I like to solve real-world problems and to learn new things.
- I don't like unnecessary complexity and reinventing the wheel.

Tech skills

- Algorithms, data structures
- GNU/Linux, TCP/IP
- Go, Python, C, Lua
- PostgreSQL, Redis, RabbitMQ
- Docker, Ansible
- Prometheus, Grafana

Experience

Software Engineer at [Enapter](#) (2020-10 - Present)

- Built a distributed microservices architecture for the Enapter IoT platform, managing multi-terabyte TimescaleDB databases.
- Developed an open-source MCP server, enabling AI assistants to seamlessly interact with the platform.
- Created custom Grafana plugins to visualize timeseries data and execute device commands.

Software Engineer at [TradingView](#) (2019-01 - 2020-10)

- Developed and maintained a high-performance HTTP proxy in Go, used for real-time financial data streaming.
- Designed and implemented an integration testing framework using Python and Docker.
- Conducted rigorous performance and load testing to ensure backend reliability.

Test Automation Engineer at [Navico](#) (2017-04 - 2019-01)

- Maintained and expanded a Python-based regression testing suite targeting backend APIs for marine cartography products.
- Developed automated BDD tests using C#.
- Conducted functional and manual testing to ensure software reliability.

Education

- 2016-09 - 2017-09: **Infocommunication Technologies** at [ITMO University](#)
- 2013-09 - 2016-09: **Foreign Languages** at [Omsk State Pedagogical University](#)

Languages

- Russian (native)
- English (fluent)
- German (upper intermediate)
